

Client Touch CRM User Manual

How to track outreach, responses, and follow-ups in your CRM spreadsheet

Workbook	Client Touches CRM.xlsx
Primary use	Track LinkedIn/client touches, replies, next follow-up dates, and daily actions.
Starting context	Outreach started June 7, 2026. Michelle Mgbo is currently the only respondent.
Recommended rhythm	Update the spreadsheet immediately after each touch; review the Dashboard once per workday.

Quick Start

1. Open the Dashboard tab first to see the current reply count, pending follow-ups, and action queue.
2. When you message someone, add or update the person in Contacts and log the exact activity in Touch Log.
3. Use Next Follow-up Date to decide when to reach out again. Keep the date realistic so the Dashboard queue stays useful.
4. When someone replies, change their Status to Responded, add the Response Date, and set Next Action to a concrete step such as Reply / book next step.
5. At the end of each day, scan the Dashboard for overdue or due-today follow-ups and update any stale records.

Operating rule

The Contacts tab is the current state of each prospect. The Touch Log is the history of what happened. Update both when a meaningful touch occurs.

What Each Tab Does

Tab	Use It For	Update Frequency
Dashboard	Daily view of contacted prospects, response rate, pending follow-ups, and the action queue.	Review daily; formulas update automatically.
Contacts	One row per prospect. This is where status, next follow-up date, priority, notes, and next action live.	Update after every meaningful change.
Touch Log	Chronological record of every outreach message, reply, call, or follow-up.	Add a row after each touch.
Follow-up Templates	Reusable message starters for replies, no-response follow-ups, booking, and nurture situations.	Edit when your messaging improves.
Lists	Dropdown/source values for statuses, priorities, channels, and touch types.	Edit only when you want to add new CRM categories.

Daily Workflow

Morning Review

- Open Dashboard and look at Follow-ups due today and Overdue follow-ups.
- Start with any Responded contacts, especially Michelle, because active conversations decay faster than cold follow-ups.
- Use the Action Queue to decide what must happen today.

After Sending a Message

1. Go to Touch Log and add a new row with the date, contact, channel, touch type, direction, outcome, message notes, and next step.
2. Go to Contacts and update Last Touch Date, Last Message Snippet, Notes, and Next Follow-up Date.
3. If the message is a follow-up to a non-responder, keep Status as Pending Follow-up until they reply or opt out.

After Receiving a Reply

1. Change Status in Contacts to Responded.

2. Enter the Response Date.
3. Set Priority to High if the reply suggests real interest or a near-term pain point.
4. Write a clear Next Action such as Reply / book next step, Send example workflow, or Ask discovery question.
5. Log the reply in Touch Log so the conversation history stays complete.

Field Reference

Field	Meaning	How to Use
Status	Current relationship state for the prospect.	Use Pending Follow-up, Responded, Meeting Booked, Nurture, Not Interested, Do Not Contact, or Closed Won.
Next Follow-up Date	The next date you should take action.	Set this every time you send a message or get a reply. This drives the Dashboard.
Priority	How important the next action is.	Use High for active replies or strong-fit prospects; Medium for normal follow-ups; Low for nurture.
Notes	Context you need before writing the next message.	Capture pain points, objections, relevant company details, or what to personalize.
Last Message Snippet	Short reminder of the last outbound or inbound message.	Keep it brief enough to scan from the Contacts tab.
Next Action	The next move you should make.	Make this action-oriented, not vague. Example: Send Michelle booking question.

Using the Follow-up Templates

The templates are starting points. Personalize the first sentence whenever possible so your outreach does not feel copied and pasted.

- Use Responder reply for Michelle and any future prospect who replies.
- Use No-response follow-up 1 about two to three days after the first message if there is no reply.
- Use No-response follow-up 2 about five to seven days after the first follow-up if the prospect still has not replied.
- Use Book meeting only after a prospect shows interest or asks to learn more.
- Use Not now when someone gives a soft no but leaves timing open.

Status Rules

Situation	Set Status To	Next Action
Sent initial or follow-up message; no reply yet	Pending Follow-up	Set the next follow-up date.
Prospect replies with any meaningful response	Responded	Reply with a discovery question or meeting ask.
Prospect agrees to a call	Meeting Booked	Add meeting details to Notes and Touch Log.
Prospect says later / not right now	Nurture	Set a future follow-up date.
Prospect says no	Not Interested	Stop active outreach unless they invite future contact.
Prospect asks not to be contacted	Do Not Contact	Do not message again.

Recommended Cadence

- Day 0: Send the first message after connecting.
- Day 2 or 3: Send No-response follow-up 1 if there is no reply.
- Day 5 to 7: Send No-response follow-up 2 if there is still no reply.
- After a reply: respond within one business day and aim to move toward a discovery question or short meeting.

Quality Checks

- Every active prospect should have a Status and Next Follow-up Date.
- Every sent or received message should have a Touch Log entry.
- Dashboard response rate should make sense based on the Contacts tab.
- No one marked Do Not Contact should have a future follow-up date.
- The Next Action column should say what to do next, not just repeat the status.

Michelle-specific next move

Because Michelle is the only current respondent, prioritize a tailored reply before sending more cold follow-ups. Use the Responder reply template, then adapt it to what she actually said.
